Turn Potential in to Performance

Trans

Foresee

Evaluate
Opportunities

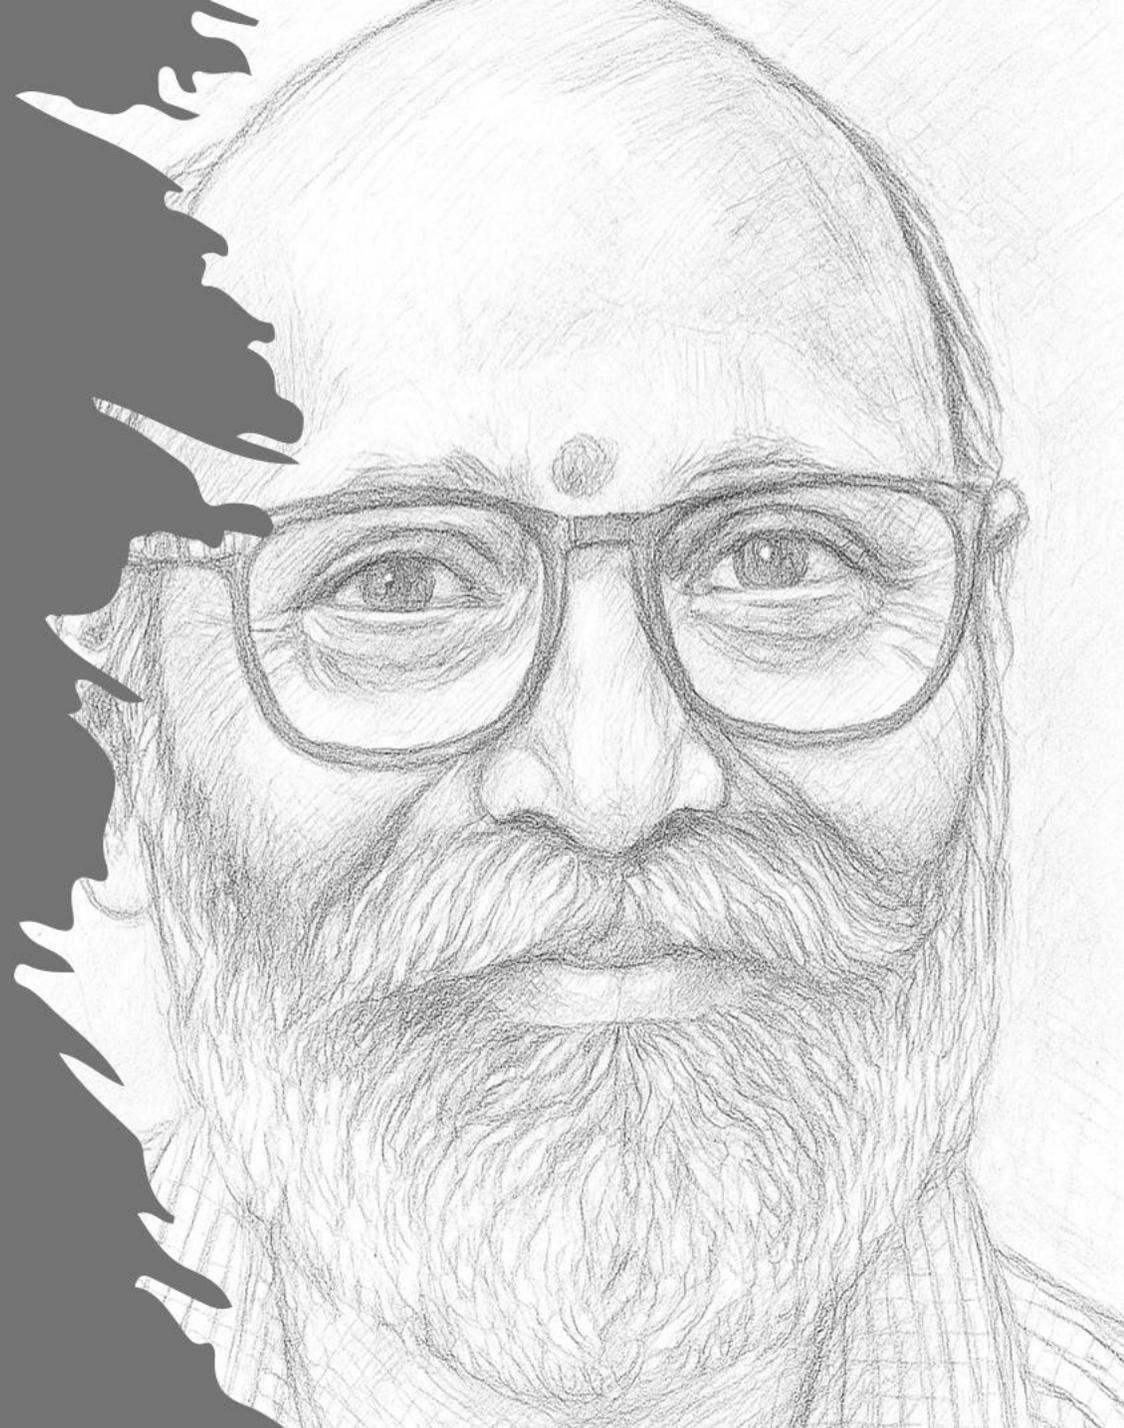

Empowering industries to embrace the **Digital** future, we turn ideas into action and challenges into opportunities, helping you achieve **operational excellence** and unparalleled performance.

ABOUT

Trans **Foresee Industrial Digital Consultants LLP**

The firm I launched after serving as CEO of an industrial automation and system integration company for over two decades. With deep, hands-on experience in driving large-scale automation, OT-IT integration, and business transformation, I now help enterprises, B2B startups, and OEMs navigate complexity with clarity.

My mission is to bridge innovation, technology, and industry by offering strategic consulting, digital roadmaps, and go-to-market support. As a solopreneur, I bring not just expertise—but ownership, agility, and a personal commitment to every engagement.

Foresee the Future with the Power of 4C:

Consult. Concept. Construct. Cognizance.

VALUE PROPOSITIONS

- ✓ Transform innovation into measurable impact for manufacturers and B2B players
- ✓ Act as a strategic connector across industry: manufacturers, OEMs, startups, and academia
- ✓ Deliver digital roadmaps and automation architectures aligned with business goals
- ✓ Drive Industry 4.0 adoption through hands-on consulting, workshops, and training
- ✓ Support OT-IT integration, AI, robotics, and digital twin implementations
- ✓ Co-develop innovative products with OEMs and startups
- ✓ Guide startups and tech partners with go-to-market strategy and execution
- ✓ Enable scalable, ecosystem-driven industrial innovation

Strategic insight meets hands-on execution to drive industrial innovation and transformation

Our Core Services

Business Strategy

Operational Improvement

Data insights & automation

We help organizations identify high-impact digital use cases aligned with their strategic and supply chain goals. Our consulting covers digital readiness assessments, opportunity mapping, and roadmap definition to accelerate sustainable growth and competitive edge.

Key Outcomes:

- ✓ Strategy-aligned digital roadmap
- ✓ Prioritized use cases with ROI focus
- ✓ Supply chain integration insights

Our Core Services

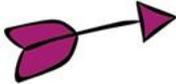

Business Strategy

Operational Improvement

Data insights & automation

Idea

To do

Doing

Done

We assess and optimize manufacturing operations to boost productivity, quality, and agility. Our approach includes facility evaluations, process redesign, and transformation planning that deliver measurable outcomes across operations.

Key Outcomes:

- ✓ Improved production efficiency
- ✓ Enhanced process reliability
- ✓ Increased flexibility and throughput

Our Core Services

Business Strategy

Operational Improvement

Data insights & automation

We architect and build intelligent systems that unify IT and OT, enabling real-time visibility and decision-making. From sensor integration to dashboards, we help clients create robust cyber-physical systems.

Key Outcomes:

- ✓ Smart dashboards and analytics
- ✓ Real-time data-driven decisions
- ✓ Scalable IT-OT architecture

Our Core Services

Special purpose Machines

Clean Tech Integration

B2B & Startup Growth enablement

We engineer custom-built automation systems for repetitive shop floor tasks and in-process quality checks. Using machine vision and X-ray technologies, we develop inspection and handling solutions tailored to your specific products. Execution is delivered through trusted associate partners.

Key Outcomes:

- ✓ Enhanced in-line quality control
- ✓ Improved speed and operational flexibility
- ✓ Reliable and consistent inspection
- ✓ Support for Statistical Process Control (SPC)

Our Core Services

Special purpose Machines

Clean Tech Integration

B2B & Startup Growth enablement

We design and implement tailor-made equipment and systems for industrial waste management and energy conservation—turning sustainability goals into operational realities. From converting RDF to syngas and hydrogen, to deploying waste heat recovery and pyrolysis systems, our process solutions are built for industrial impact. These projects also align with CSR and ESG commitments.

Key Outcomes:

- ✓ Circular use of industrial waste streams
- ✓ Reduction in carbon footprint and energy costs
- ✓ Support for ESG & CSR mandates
- ✓ Scalable green technology deployment

Our Core Services

Special purpose Machines

Clean Tech Integration

B2B & Startup Growth enablement

We empower B2B and tech startups by helping them define scalable systems, align their product offerings with real market needs, and build strong go-to-market strategies. Through expert-led training, pitch refinement, and targeted workshops, we ensure startups find the right markets with the right message and execution path..

Key Outcomes:

- ✓ Aligned GTM and business model strategy
- ✓ Refined product-market fit and value proposition
- ✓ Structured workshops for team enablement
- ✓ Accelerated market entry and growth confidence

7C Process

Approach

Customer Engagement

We begin by deeply understanding your business challenges, industry context, and transformation goals. This initial step ensures alignment between your strategic vision and our solution approach.

Co-Creation & Ideation

Working collaboratively, we facilitate brainstorming sessions to explore potential solutions. We map out feasible technologies, identify opportunities, and define use cases tailored to your operations.

Concept Approval

Concepts are validated for technical, financial, and operational fit. We present proof-of-value proposals to ensure every idea aligns with your KPIs and organizational readiness.

Consensus Building

We engage key stakeholders to build internal alignment and ownership. This includes refining the solution scope, setting priorities, and ensuring cross-functional agreement.

Construction & Solution Design

Detailed design and architecture of the proposed solution begins. We coordinate with engineering partners or OEMs to ensure the build is robust, scalable, and aligned with your domain conditions.

Commissioning & Execution

Solutions are implemented and commissioned with full support. We oversee testing, integration, and performance validation to ensure a smooth go-live and minimal disruption.

Customer Support & Continuity

Our engagement doesn't end at delivery. We provide post-implementation guidance, training, and support—ensuring sustainable adoption, performance tracking, and continuous improvement.

A proven framework for delivering high-impact industrial solutions through **collaboration, clarity, and execution excellence.**

Navigating the Complexity of Industrial Transformation

Industrial and process-driven businesses face a unique set of challenges when it comes to embracing transformation. While the promise of Industry 4.0 and smart manufacturing is appealing, the path to implementation is often unclear and scattered. **Here's why:**

Key Challenges Faced by Industrial Clients

One-size-fits-all doesn't work

Each industrial process and domain comes with its own unique constraints. There's no universal solution — crafting the right approach requires a deep understanding of the specific industrial condition, domain goals, and operational workflows.

Lack of cross-functional expertise

Transformation requires inputs from mechanical, electrical, automation, digital, and domain-specific experts. However, very few companies can afford to keep all these resources in-house, making it difficult to create and integrate custom solutions effectively.

Difficulty quantifying intangible benefits

Unlike corporates, many SMEs struggle to visualize the long-term value from transformation — such as improved agility, responsiveness, or data-driven decision making. This limits the buy-in from stakeholders.

Siloed partner ecosystem

Many solutions require involvement of multiple specialized vendors — from sensors to machines to software. In most cases, there's no single point of coordination to align them toward a shared business objective.

High risk of execution gaps

Without an end-to-end facilitator, projects face frequent misalignments between expectation and delivery. Fragmented accountability leads to cost overruns, delays, or under-delivery.

How We Add Value:

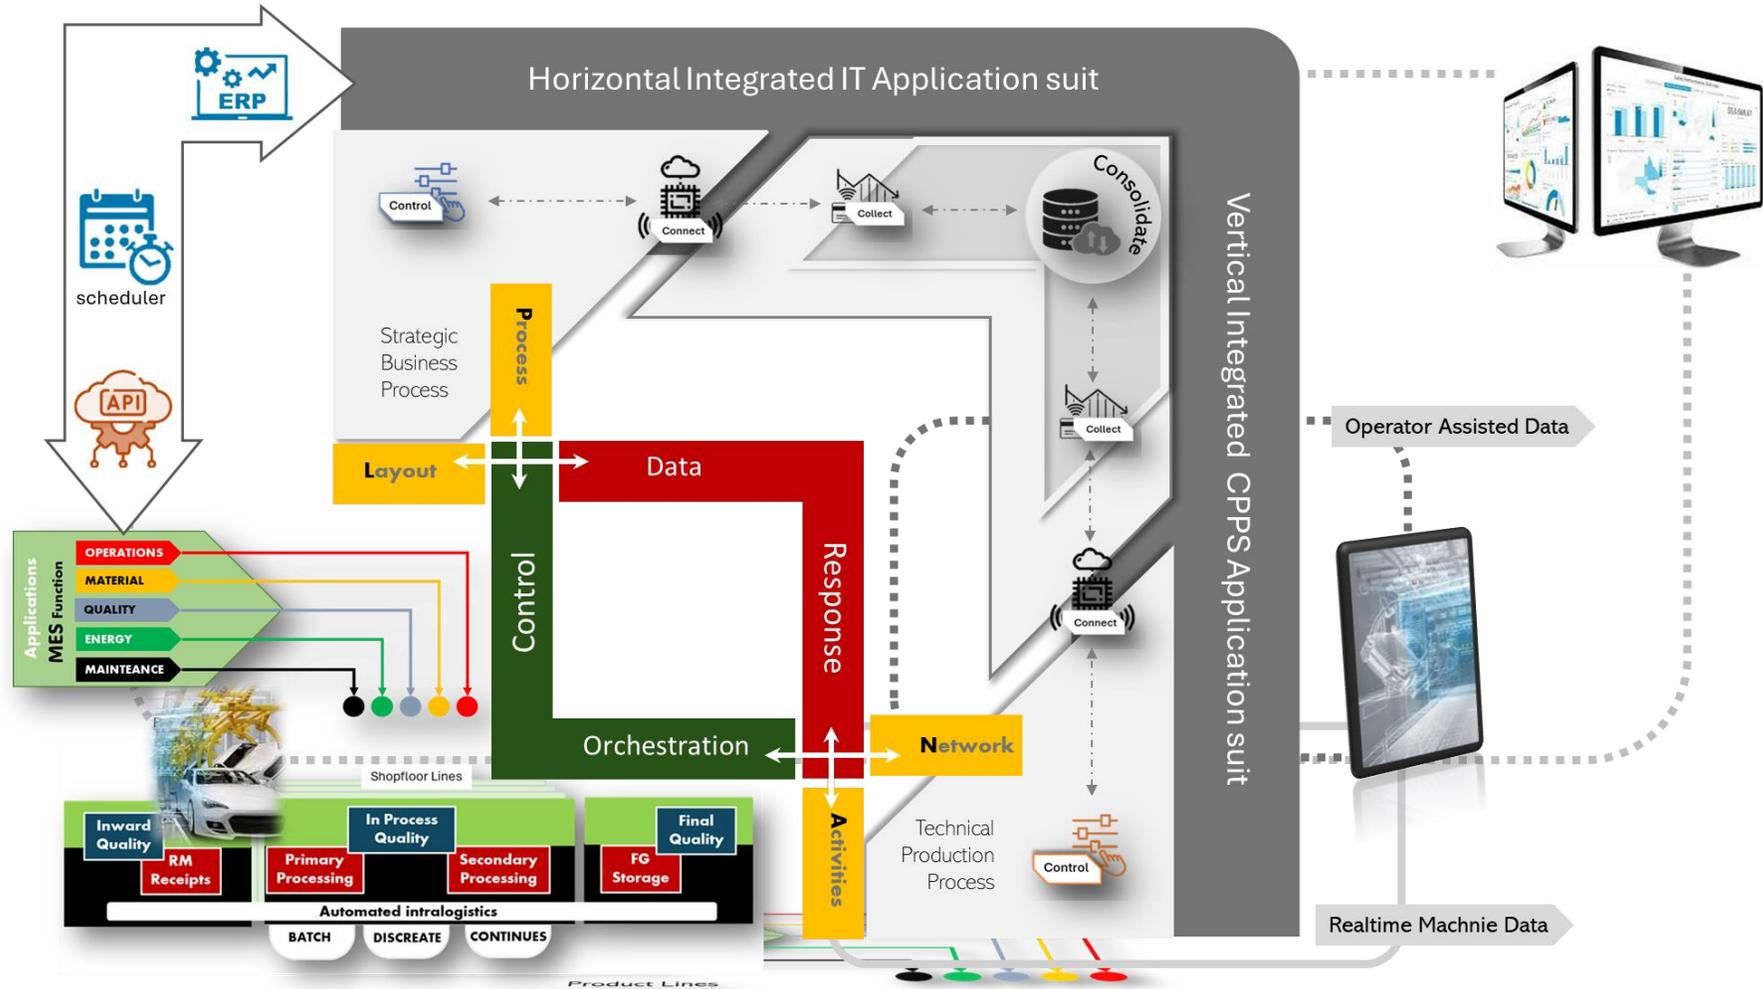

A **Central Node** for Industrial Transformation

As a domain-aware transformation consultant, I operate as the **central orchestrator** between your business needs and solution execution. **Here's how:**

- ✓ **Requirement Engineering & Use Case Identification**
We work closely with your teams to define goals, evaluate process gaps, and derive relevant use cases that deliver tangible impact.
- ✓ **Concept Creation & Expert Mobilization**
We bring together the right experts — either from your internal teams or our associate network — to co-create solutions tailored to your needs.
- ✓ **Modular Delivery Models** (*We offer flexibility*)
 - **Advisory + Project Facilitation**, where you retain control and vendors.
 - **End-to-End Execution**, where we take full ownership of design to delivery.
- ✓ **Domain-Focused, Affordable Execution**
You get access to specialized knowledge, cross-functional experts, and proven tools — without the burden of maintaining them internally.
- ✓ **Single Point of Accountability**
We act as the bridge between strategy and execution, ensuring alignment across technical, business, and operational layers

PLAN-IT for BIG PICTURE

Explore **“PLAN-IT”** framework to evaluate, enhance, and excel in your transformation journey. Which evaluate businesses across six aspects: Process (value streams), Layout (physical assets), Activities (automation levels), Network (interoperability), Impact (success metrics), and Team (adaptability). Assessed through 20 dimensions, identifies areas for improvement and paves the way for transformation.

Industrial Consultants

we excel in bridging gaps and building **value**. Our **consulting** services empower businesses to harness the right strategies and achieve sustainable success. Simultaneously, through our product delivery ecosystem, we transform concepts into reality by **sourcing and supplying cutting-edge technology solutions** through our partner network. This approach ensures targeted, high-impact **value** for our customers, enabled by strong collaboration and tailored innovations.
